

**Acclaim**<sup>®</sup>  
EXTRA HERBICIDE

# Product information sheet

- // Active Ingredient: Fenoxaprop-p-ethyl
- // Formulation: Emulsion, oil in water
- // WSSA Group: 1
- // Signal Word: Caution

## Best Uses

- // Controls crabgrass and goosegrass postemergence
- // Controls Japanese stiltgrass in turf and ornamental areas
- // For use in cool-season and zoysia turf, and around ornamentals

## Attributes

- // Systemic activity, rapidly absorbed through the foliage
- // Tolerant on labeled turf species
- // Broad-spectrum control of grassy weeds

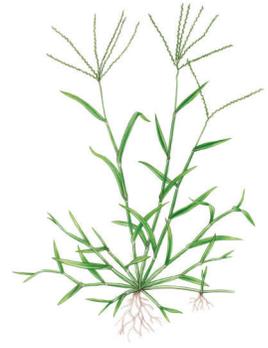

## How to Apply

### Goosegrass and Crabgrass Control

Acclaim Extra can be used to control both goosegrass and crabgrass in cool-season turf as well as in zoysiagrass. Goosegrass in cool-season turf is a growing problem without many postemergence selective control options. Rates depend on the size of the weed.

Goosegrass

Crabgrass

## Key Strengths

- // Postemergence annual and perennial grassy weed control
- // Controls both goosegrass and crabgrass
- // Bermudagrass suppression in combination with triclopyr ester

Annual Grass Weed Growth Stage	Rate (per acre)	Rate (per 1,000 sq ft)
1-leaf to 2-leaf <sup>1</sup>	3.5 fl oz	0.08 fl oz
Untilled <sup>2</sup>	9.0 fl oz	0.21 fl oz
Untilled	13.0 fl oz	0.30 fl oz
1-tiller to 2-tiller	20.0 fl oz	0.46 fl oz
3-tiller to 4-tiller	28.0 fl oz <sup>3</sup>	0.64 fl oz <sup>3</sup>
4-tiller to 5-tiller	39.0 fl oz <sup>3</sup>	0.90 fl oz <sup>3</sup>

<sup>1</sup>Apply this rate for use in multiple applications on bentgrass turf. <sup>2</sup>Apply this rate only when tank mixing with pre-emergence herbicides. <sup>3</sup>Do not apply more than 28.0 fl oz per acre of product to Kentucky bluegrass or zoysiagrass per application. Do not apply more than 39.0 fl oz per acre of product to tall fescue, fine fescue or annual and perennial ryegrass.

## How to Apply (continued)

### Bermudagrass Control

Bermudagrass is a major weed problem in tall fescue and zoysia turf, particularly in the transition zone of the United States. Not many postemergence selective control options exist for controlling this tough perennial weed.

Tank-mixes of Acclaim® Extra and triclopyr ester may be used to effectively control bermudagrass in zoysiagrass and tall fescue when used in a treatment program. Use a tank mixture of Acclaim Extra at 20-28 fl. oz./acre and 16-32 oz/A Turflon Ester (Dow) when bermudagrass becomes evident in zoysiagrass and tall fescue. Do not apply triclopyr ester to zoysiagrass unless some injury can be tolerated. For the best results, repeat applications every 4-6 weeks for up to 5 applications per season depending on your local conditions. Use the lower rates for uniform populations of bermudagrass intermixed with the desired turf, and higher rates where large bermudagrass patches are dominant in the turf stand. Acclaim Extra has a maximum use of 120 fl. oz./acre (2.75 fl. oz./1,000 sq. ft.) per growing season.

### Japanese Stiltgrass Control

Japanese stiltgrass (*Microstegium vimineum*) is an annual grassy weed that is adapted to low-light conditions and was introduced into the U.S. in 1919. Common on roadsides, disturbed riparian areas and shaded areas with bare ground, it is considered an invasive species. Japanese stiltgrass has invaded roadsides, parks, landscapes and recreation areas. Acclaim® Extra is effective on this weed and can be used on cool-season turf and around ornamentals, unlike many nonselective, postemergence herbicides. Spot applications of Acclaim Extra at 40 oz/100 gals applied just to the point of leaf runoff are recommended for controlling Japanese Stiltgrass.
